Greetings!

### Models 1000 and 2000 Ion Generators

Aerisa's product focus for August are our [models 1000](#) and [2000](#) duct mounted ion generators. These units are designed to remove odors, particulates, mold, virus and other airborne contaminants from very specific areas within a school, office building, hospital, light industrial facility or any other location that may have an odor problem.

These units utilize a variety of different tubes (selected based on the contaminant load) and can hold a single tube (model 1000) or two tubes (model 2000). There is an integral five position switch so the user can increase or decrease the level of ions being produced to match the level of odors in the space. Also integral to this unit is a green LED indicator light which, when lit, shows proper operation.

The model 1000 can clean up to 3,500 CFM of air and the 2000 can handle up to 5,000 CFM. 115V AC or 230V AC power can be used and the unit includes a NEMA 15 receptacle.

Click here for the [Model 1000](#) Ion Generator Submittal form and here for the [Model 2000](#) Submittal form. A general commercial [product brochure](#) is available here. Click if you would like to [join the mailing list](#) or would like to [forward this to a friend](#).

Model 1000

Model 2000

Aerisa manufactures bipolar ionization technology that results in **dramatic air quality improvements** in a wide array of markets including industrial, institutional, commercial and residential. Aerisa successes are found in the most demanding applications, such as wastewater treatment, food processing, casino, athletic, and transportation.
